                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 3, Application US/09274752D
; Sequence 3, Application US/09274752D
; Patent No. 6812335
; GENERAL INFORMATION:
; APPLICANT: An Songahu
; TITLE OF INVENTION: Human Polypeptide Receptors for Lysophospholipids and
; TITLE OF INVENTION: Sphingolipids and Nucleic Acids Encoding the Same
; FILE REFERENCE: A-57501/DJSTAL
; CURRENT APPLICATION NUMBER: US/09/274,752D
; CURRENT FILING DATE: 1999-03-23
; NUMBER OF SEQ ID NOS: 29
; SEQ ID NO 3
; SEQ ID NO 3
; LENGTH: 353
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            VFIVCWLPAFSILLLDYACPVHSCPILYKAHYLFAVSTLNSLLNPVIYTWRSRDLRREVL 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB 1; Length 352;
                            JOSTANDA STATE OF TABLICATION US/08196989B

Patent No. 5585476

GENERAL INFORMATION:

APPLICANT: MACLEMENA, A. John

TITLE OF INVENTION: Molecular Cloning and Expression of

TITLE OF INVENTION: G-Protein Coupled Receptors

NUMBER OF SEQUENCES: 14

CORRESPONDENCE ADDRESS:

ADDRESSEE: Saliwanchik & Saliwanchik

STREET: 2421 N.W. 41st Street, Suite A-1

CITY: Gainesville
STATE: FL

COUNTRY: US

STATE: FL

COMPUTER READABLE FORM:

MEDIUM TYPE: Flopsy disk

COMPUTER: IBM PC Compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.25

CURSSIFILING DATE: 15-FEB-1994

FILING DATE: 15-FEB-1994

STICHARLING SYSTEM FORMATHER.

APPLICATION NUMBER: US/08/196,989B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              22;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

Sequence 2, Application US/09225024

Patent No. 6518414

Patent No. 6518416

PAPLICANT: MacLennan, A. John

TITLE OF INVENTION: Molecular Cloning and Expression of TITLE OF INVENTION: Protein Coupled Receptors

NUMBER OF SEQUENCES: 16

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                           IndelB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            COMPUTER READABLE FORM:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 33, Age Sequence 508, Assequence 19, Age Sequence 3, App

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
FUNCTION: Receptor for the lysosphingolipid sphingosine 1-phosphate (SIP). SIP is a bloative lysophospholipid that elicits diverse physicalogical effect on most types of cells and tissues. When expressed in rat HTC4 hepatoma cells, is capable of mediating SIP-induced cell proliferation and suppression of apoptosis. SUBCELLULAR LOCATION: Integral membrane protein. SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        InterPro; IPROUGE:

Ancellin N., Hla T.;
Ancellin Darmacological properties and signal transduction of the sphingosine 1-phosphate receptors EDG-1, EDG-3, and EDG-5.";
J. Biol. Chem. 274:18997-19002(1999).
-! FUNCTION: Receptor for the lysosphingolipid sphingosine 1-phosphate (SIP). SIP is a bloactive lysophospholipid that elicits diverse physiological effect on most types of cells and tissues.
-! SUBCELLUIAR LOCATION: Integral membrane protein.
-! TISSUE SPECIFICITY: Expressed in all developing tissues with highest levels detected in primitive, transformed cells. Relative abundance: lung > kidney = skin = gut > spleen > brain > liver.
-! SIMILARITY: Belongs to the G-protein coupled receptor I family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MGSLYSEYLNPNKVQEHYNYTKETLETQETTSRQVASAFIVILCCAIVVENLLVLIAVAR
